

KALO CAPITAL MANAGEMENT, LP

September 2, 2011

Dear Investor:

For the month ended August 31, 2011, the Kalo Capital Management, LP fund depreciated 2.5% on a gross basis (-2.2% net). The Fund lost 420 bps from long positions and gained 170 bps from short exposed positions.

	Bps Gain/Loss	Avg Exposure	Average Performance
Longs	(420)	63%	-6.7%
Shorts	170	35%	4.9%

Gains were led by Jaguar Mining (JAG), Fuel-Tech (FTEK), GT Advanced Technologies (GTAT), and short exposed index positions. The biggest detriments to performance came from IntraLinks (IL), Digital River (DRIV), and Vocus (VOCS).

August saw a significant drop in the stock market, with the Russell 2000 falling over 18% in just the first six days. It then spent the next 10 days bouncing around with a roughly 8% range, but going nowhere. And then finished the last 7 days with a 11% rally. This dramatic volatility made for an extremely challenging month. Kalo did reasonably well, limiting losses in the down move, and picking a few new names that were overly beaten down and adding to some existing names, which benefitted from the end of month rally. Kalo also benefitted from the use of inverse ETFs which inherently increase the size of the bearish bet as the market falls, as opposed to traditional short positions which shrink in size as the market falls. This provided a natural reduction in net exposure in the rapid precipitous fall early in the month. Previously I only used these inverse positions for a portion of index bearish bets, while I used the more traditional short positions for a portion. I have since adjusted this to use the inverse positions for all of the index-related bearish bets (which I believe will provide additional downside protection in fast downward moving markets). Net exposure ranged from 19-35% during the month, ending the month at 35%. It's also important to understand that included as a long in this net exposure is over 7% of exposure to gold mining companies, which typically are inversely-correlated with the overall market. If I considered these to be a short, it would reduce my net exposure from the current 35% to 21%.

	Russell	Kalo	Capture rate
First 6 days	-18.3%	-5.4%	29%
Next 10 days	0.1%	-0.7%	
Last 7 days	11.6%	3.7%	32%
Total	-8.8%	-2.5%	29%

At this stage, I continue to believe the economy does not look good from a macro perspective. Further, due to the rapid market decline, I believe the economy will likely be self-fulfilling and further slow, driven by the fear the stock market has created. That being said, many names have already been significantly hit and trade at reasonable valuation multiples and expectations are already quite grim. From a seasonality perspective, September also tends to be one of the worst months for stock market performance. While this gives me some concern about the next month, it is lessened by the fact that August was such an unusual month, and there is potential for government initiatives to spark the market coming in September as well. As a result, I anticipate keeping gross exposure somewhat low and net exposure in the low-mid range of the typical 20-55%.

* Performance and other quantified metrics shown here are estimates for the EGRV (Emerging Growth with Reduced Volatility) Strategy. Performance metrics start on October 11, 2010, when Kalo, LLC started to manage assets for a separately managed account referred to as "the tracking managed account". Performance numbers represent the tracking managed account until March 1, 2011, when the Kalo Capital Management, LP fund was launched. 'Gross' represents the gross performance before fees. 'Net' represents performance net of a 2% management fee and 20% performance fee for every month. 'Net Exp' and 'Gross Exp' represent the average net and gross exposure over the time period, where inverse ETFs are calculated as short exposure and any ultra ETFs are adjusted to reflect the multiple of its exposure. 'AUM' represents the total assets under management at the end of the month in both managed accounts and the hedge fund.

I appreciate your continued support.

Sincerely,

Steven D. Friedman
Founder and Chief Investment Officer

Please note that Kalo's expectations and strategy can change regularly and the views expressed here may change.

KALO CAPITAL MANAGEMENT, LP

OVERVIEW OF KALO CAPITAL MANAGEMENT

Background

Steven Friedman is the founder and Chief Investment Officer of Kalo, LLC ("Kalo"), and manages a long/short equity strategy focused on emerging growth opportunities. Kalo manages the Kalo Capital Management, LP fund ("The Fund"), as well as separately managed accounts.

Strategy

The Fund primarily focuses investments on US listed emerging growth companies characterized by large open-ended growth opportunities, disruptive technologies, disruptive business models, or changing industry dynamics. These investments may occur in any sector but are commonly in the following sectors: internet, technology, media, telecom, alternative energy, medical devices, and manufacturing. In addition, the Fund will trade other stocks long and short that it believes are temporarily undervalued or overvalued.

The Fund believes there is more potential for consistent, outsized returns in long positions over time as companies grow. Thus, the Fund favors having a net long exposure. However, the Fund also looks to hedge these long positions with index and company-specific short exposed positions to create additional alpha, smooth returns and limit drawdowns. This risk control enables the Portfolio Manager to take advantage of market contractions.

Bullish positions typically consist of fundamental positions and trading opportunities, while bearish positions consist of fundamental shorts, trading opportunities, and index hedges. The majority of the Fund's positions will be in equities. Derivatives are used opportunistically in order to: make an investment with extremely high volatility, create a hedge to a specific position or portion of the portfolio, or to gain additional exposure to an idea.

Investment Philosophy

The Fund's objective is to produce relatively low volatility returns with consistent alpha primarily by identifying emerging growth opportunities that are fundamentally mispriced by the market. Throughout many industries, companies bring products/services to the market that have the opportunity for extremely fast-paced growth. Many of these opportunities are caused by the introduction of disruptive technologies, disruptive business models, and changing industry dynamics. When these transforming events occur, the Fund believes well managed companies positioned properly can achieve superior growth and offer the opportunity for attractive stock returns.

The Portfolio Manager believes that the market often misprices these emerging growth stories. This provides the Fund the opportunity to build positions when it believes that the general market is not appropriately valuing the stock. This opportunity is often caused by the following:

- **The market broadly values companies on near term results, disregarding longer term results.** The market focuses on valuation multiples looking out 1-2 years, initially disregarding the following years. However, many of these opportunities see accelerating EPS growth 2-4 years out, driven by operating leverage and economies of scale, which the market overlooks. By establishing an investment before the market focuses on these outer years, we believe that the Fund may earn consistent alpha.
- **The investor community often develops unrealistic financial expectations.** These inflated expectations can be caused by a lack of industry understanding, irrational exuberance, and management hype. This creates opportunities for short sale investments.

KALO CAPITAL MANAGEMENT, LP

- **Sell-side analysts often don't recognize or acknowledge the sales growth and/or leverage impact that can occur during certain inflection points.** The Fund believes that sell-side analysts will generally only be comfortable forecasting a certain amount of fundamental growth, even when evidence points to more significant growth, in order to not be recognized as overly bullish. This situation often leads to companies significantly exceeding earnings expectations, despite the stock being known by the investment community.
- **The broader market often over-reacts to positive or negative events.** These over-reactions cause dramatic stock price movements, which may create opportunities with relatively low downside risk when a stock is overly depressed as well as short opportunities when a stock is inflated.
- **Many emerging growth companies are not well known by the broader market.** Many emerging growth companies are under followed by sell-side analysts, and thus are either unknown or not well understood by the investor community. Discovering these companies before the general market creates the opportunity to make an investment while it is undervalued.

The Fund believes that traditionally investments focused in this space have been characterized by attractive returns accompanied by very high volatility. The Portfolio Manager believes it is possible to capture most of these inherent returns with reduced volatility by using a balanced, diversified, and hedged portfolio approach, supported by rigorous fundamental and stock technical analysis. The Fund will also utilize options to control downside risk. The Fund targets absolute performance with low drawdowns, but expects better absolute performance in up or flat markets, than in down markets.

Investments

Fundamental Longs and Calls: Emerging Growth Opportunities

The Fund believes emerging companies with good business models create an excellent investment vehicle for outsized returns. The future earnings power of companies with certain key characteristics are often under-appreciated, creating the investment opportunity. The key characteristics the Fund looks for include:

- Large open-ended growth opportunity
- Markets with low, but growing penetration
- Demonstrated traction with their customer base
- Leading market share
- Significant barriers to entry
- Profitable business model with significant operating leverage
- Recurring revenues
- Sufficient capital
- Potential for above average returns based on future market multiples, combined with limited downside risk
- Good technical trading pattern

Fundamental Shorts and Puts: Deteriorating or Flawed Fundamentals

The Fund primarily looks for two types of fundamental bearish positions: i) emerging growth companies that the Portfolio Manager feels are fundamentally flawed and likely to decline; and ii) companies impacted by industry changes such as increasing competition or shifting demand; . As industries change, many companies' products/services become inferior to ramping new

KALO CAPITAL MANAGEMENT, LP

technologies. When this momentum occurs, these companies often face significant challenges and suffer from dramatic reductions to their earnings power. The Fund looks to short these names when the investment community does not fully realize this market shift is occurring, or how significantly it may hurt the earnings power of the company.

Trading Opportunities

The Fund opportunistically invests in stocks that may have imminent catalysts, have had dramatic price fluctuations, or other timely traits. Occasionally, the Fund recognizes imminent potential catalysts that it believes will impact near term stock prices. Stocks that see dramatic price fluctuations in either direction often are exaggerated and create the opportunity for a quick rebound to earlier levels. These opportunistic investments tend to be of shorter duration than the fundamental positions and occur on both the long and short side.

Hedges

The Fund often hedges long positions with index and company specific short exposed positions, in order to limit drawdowns when the stock market contracts. A portion of these hedges typically consist of index ETFs.

Steven D. Friedman, CFA Background

Steven D. Friedman is the founder and Chief Investment Officer of Kalo, LLC and Kalo Capital Management, LP. At Kalo, Steven directly manages client accounts and a hedge fund utilizing the Emerging Growth with Reduced Volatility ("EGRV") strategy he developed over the last decade. The EGRV strategy primarily focuses investments on US listed emerging growth companies characterized by large open-ended growth opportunities, disruptive technologies, disruptive business models, or changing industry dynamics. Prior to founding Kalo in 2011, he spent ten years in the hedge fund industry as a Portfolio Manager and Senior Analyst, focused on the Emerging Growth space, initially as an analyst at Feirstein Capital Management, and subsequently as a Portfolio Manager in the Emerging Managers Program at Pequot Capital, and later as a Portfolio Manager and Partner at Manalapan Oracle Advisers. Prior to the hedge fund industry, Steven was an investment banker at Lazard Freres & Co, LLC. Steven has an MBA from Columbia University and BBA from the University of Michigan. He has been a CFA Charterholder since 2005 and is a Registered Investment Adviser in New Jersey.
