Monthly Report - Kalo Emerging Growth with Reduced Volatility Strategy

Dear Investor:

For the month ended October 31, 2014, the Kalo Capital Management, LP fund gained approximately 0.5% net, versus a gain of 6.5% for the Russell 2000.

Performance Commentary

October proved to be a very challenging month with dramatic swings in the stock market. Early in the month, stocks looked mildly weak, and the tech space sold off after one company stated their belief that the semiconductor industry was entering a cyclical downturn. Shortly after, Ebola concerns reached their peak in the United States and large cap stocks started to meaningfully sell off for the first time all year. We have written frequently about our belief that smaller names have already experienced more volatility and weaker relative performance versus the larger cap stocks that had continued to make new highs. This finally reverted the other way with this downturn. At the midpoint of the month, the S&P 500 was down over 7%, while Kalo was down only 1.5%. Our relative outperformance was driven mostly by the relative outperformance of our longs, combined with our shorts (including significant shorts tied to the S&P 500 index). We were greatly concerned about Ebola spread in the United States after the highly publicized mistakes made at the hospital in Dallas. However, in the second half of the month the market snapped back dramatically across the board driven by reduced Ebola concerns, investors' being conditioned to "buy the dips" and the Bank of Japan unexpectedly increasing its monetary stimulus program on the last day of the month.

KALO CAPITAL MANAGEMENT, LP

For the month of October, the Fund gained approximately 375 gross bps from long positions and lost 298 gross bps from short exposed positions. Gains were led by Energy Recovery (ERII), LivePerson (LPSN) and Real-D (RLD). Losses were led by Monster Worldwide (MWW) and eGain (EGAN).

As can be seen on the chart below, the Fund's longs underperformed vs. the Russell 2000, gaining 4.8% on average vs. the Russell's 6.5% rise. Much of this underperformance is directly related to the fact that many of our longs held up better when the Russell fell earlier in the year, and thus did not snap back as much as the Russell 2000 this month. The shorts also performed better than the Russell on average, gaining 6.9%, hurting performance. This combination resulted in -0.7% of total gross alpha generation during the month.

	Bps Gain/Loss	Avg Exposure	Average Performance
Longs	375	79%	4.8%
Shorts	(298)	-43%	6.9%
Russell 2000			6.5%

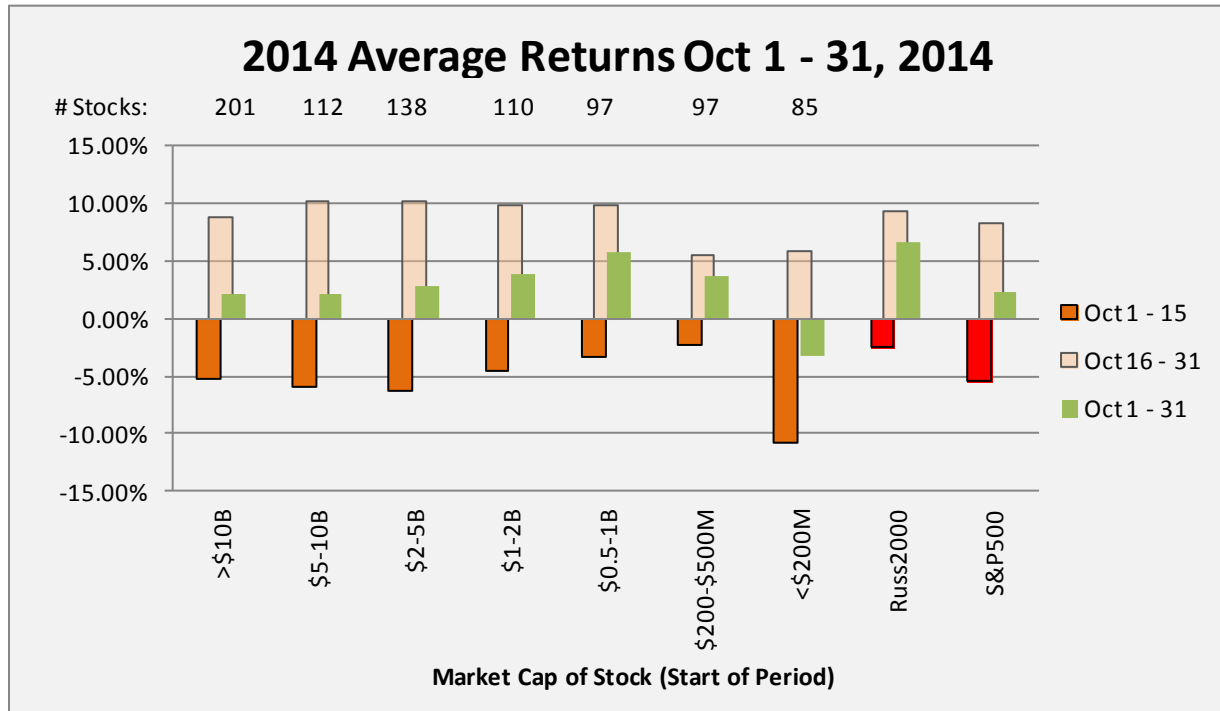

The internally managed Trading Strategy (which manages 35% of the EGRV capital), was up 0.7% net for the month.

While it is common in the hedge fund industry to focus on monthly returns, we believe it is important to highlight the downside risk control. October in particular was a month where the risk control taken at a fund can be overlooked, given the strong bounce back that occurred. As a result, we feel it is important to highlight the daily performance in such a situation, for investors to understand how risk was controlled and shed insight into what performance could have looked like if the stock market did not rebound. As the chart below shows, we reduced net exposure as the market got weaker (although we kept our gross long exposure at typical levels given our view that most of our longs were already trading at low prices). These actions resulted in our losses looking significantly better than the Russell 2000 at the lows of the month. However, as a consequence, Kalo's performance did not bounce back as dramatically as the overall stock market. However, we believe that had the market continued its fall, Kalo's performance would have looked quite stable in comparison.

KALO CAPITAL MANAGEMENT, LP

Below is the chart we have used in the past breaking out the performance by market cap for over 800 stocks in our monitor universe. In the first part of the month, large cap stocks were hurt more than smaller cap names. We believe this occurred since so many of the smaller cap names were already trading at low prices. However, when the market snapped back in the second half of the month, the large cap stocks moved up almost as dramatically as the smaller cap names. This powerful snapback for the large caps names came as a surprise to us and hurt our performance on the short side.

Big Picture Market Commentary

As November begins, many of the risks that had created uncertainty and volatility in the market (Middle East tensions, ebola, the end of quantitative easing, recent US consumer weakness, etc.) seem to have been totally forgotten about. We are weary about the potential for increased volatility although many of the companies we own continue to have strong fundamentals, balance sheets and reasonable valuations yet are still trading well below their highs. We feel it is likely that the large cap outperformance will slow while the smaller cap names play catch-up, with the potential for a strong rally into this seasonally bullish year-end period.

On the economic front, we maintain our position that the US economy continues to gradually improve, albeit at an uneven and slightly slower rate than earlier in the year. Given the combination of our growing optimism and excitement about many names we own, we continue to manage an average level of net exposure, combined with a high level of gross longs.

We are excited to continue working hard to find profitable investment ideas and being strong financial stewards of your invested capital. We appreciated your continued support.

KALO CAPITAL MANAGEMENT, LP

Please feel free to call to discuss anything.

Sincerely,

Steven D. Friedman, CFA
Founder and Chief Investment Officer

Please note that Kalo's expectations and strategy can change regularly and the views expressed here may change.

* Performance and other quantified metrics shown here are for the EGRV (Emerging Growth with Reduced Volatility) Strategy. Performance metrics start on October 11, 2010, when Kalo Capital Management, LLC started to manage assets for a separately managed account referred to as "the tracking managed account", where Net assumes a 1.5% management fee and 20% performance fee. Performance numbers represent the tracking managed account until March 1, 2011, when the Kalo Capital Management, LP fund was launched. 'Net Perf' represents performance net of a 1.5% management fee and 20% performance fee. 'Net Exp' and 'Gross Long' represent the average net and gross long exposure over the time period, where inverse ETFs are calculated as short exposure and any ultra ETFs are adjusted to reflect the multiple of its exposure. 'Russ2000' represents the Russell 2000 index. 'EEM' is the MSCI Emerging Markets Index Fund. 'Russ Micro' is the IWC - Russell Microcap Index. 'Alpha' and 'Beta' represent the portion of gross monthly returns generated by net exposure to the market based on the Russell 2000 (beta), and the additional alpha return.

The Fund utilizes several methods to ensure all accounts are treated equally.

Historical Performance - Emerging Growth with Reduced Volatility

KALO CAPITAL MANAGEMENT, LP

OVERVIEW OF KALO CAPITAL MANAGEMENT

Background

Steven Friedman is the founder and Chief Investment Officer of Kalo Capital Management, LLC ("Kalo"), and manages a long/short equity strategy focused on emerging growth opportunities. Kalo manages the Kalo Capital Management, LP fund ("The Fund"), as well as separately managed accounts.

Strategy

The Fund utilizes an Emerging Growth with Reduced Volatility ("EGRV") strategy, developed by the Chief Investment Officer over the last decade. The EGRV strategy primarily focuses investments on US listed emerging growth companies characterized by large open-ended growth opportunities, disruptive technologies, disruptive business models, or changing industry dynamics. These investments may occur in any sector but are commonly in the following sectors: internet, technology, media, telecom, alternative energy, medical devices, and manufacturing. In addition, the Fund will opportunistically trade these and/or other stocks long and short that it believes are temporarily undervalued or overvalued. This trading overlay is intended to create additional alpha performance and help smooth returns. The Fund reduces portfolio volatility through a variety of means including: i) adhering to many investment criteria for positions to limit downside risk on an investment-specific and portfolio basis; and ii) combining the emerging growth investments with other less correlated long and short positions.

The Fund believes there is more potential for consistent, outsized returns in long positions over time as companies grow. Thus, the Fund favors having a net long exposure. However, the Fund also looks to hedge these long positions with index and company-specific short exposed positions to create additional alpha, smooth returns and limit drawdowns. This risk control enables the Portfolio Manager to take advantage of market contractions.

The majority of the Fund's positions will be in equities. Derivatives are used opportunistically in order to: make an investment with extremely high volatility, create a hedge to a specific position or portion of the portfolio, or to gain additional exposure to an idea.

Investment Philosophy

The Fund's objective is to produce relatively low volatility returns with consistent alpha primarily by identifying emerging growth opportunities that are fundamentally mispriced by the market. Throughout many industries, companies bring products/services to the market that have the opportunity for extremely fast-paced growth. Many of these opportunities are caused by the introduction of disruptive technologies, disruptive business models, and changing industry dynamics. When these transforming events occur, the Fund believes well managed companies positioned properly can achieve superior growth and offer the opportunity for attractive stock returns.

The Portfolio Manager believes that the market often misprices these emerging growth stories. This provides the Fund the opportunity to build positions when it believes that the general market is not appropriately valuing the stock. This opportunity is often caused by the following:

- **The market broadly values companies on near term results, disregarding longer term results.** The market focuses on valuation multiples looking out 1-2 years, initially disregarding the following years. However, many of these opportunities see accelerating EPS growth 2-4 years out, driven by operating leverage and economies of scale, which

KALO CAPITAL MANAGEMENT, LP

the market overlooks. By establishing an investment before the market focuses on these outer years, the Fund may earn consistent alpha.

- **The investor community often develops unrealistic financial expectations.** These inflated expectations can be caused by a lack of industry understanding, irrational exuberance, and management hype. This creates opportunities for short sale investments.
- **Sell-side analysts often don't recognize or acknowledge the sales growth and/or leverage impact that can occur during certain inflection points.** The Fund believes that sell-side analysts will generally only be comfortable forecasting a certain amount of fundamental growth, even when evidence points to more significant growth, in order to not be recognized as overly bullish. This situation often leads to companies significantly exceeding earnings expectations, despite the stock being known by the investment community.
- **The broader market often over-reacts to positive or negative events.** These over-reactions cause dramatic stock price movements, which may create opportunities with relatively low downside risk when a stock is overly depressed as well as short opportunities when a stock is inflated.
- **Many emerging growth companies are not well known by the broader market.** Many emerging growth companies are under followed by sell-side analysts, and thus are either unknown or not well understood by the investor community. Discovering these companies before the general market creates the opportunity to make an investment while it is undervalued.

The Fund believes that traditionally investments focused in this space have been characterized by attractive returns accompanied by very high volatility. The Portfolio Manager believes it is possible to capture most of these inherent returns with reduced volatility by using a balanced, diversified, and hedged portfolio approach, supported by rigorous fundamental and stock technical analysis. The Fund will also utilize options to control downside risk. The Fund targets absolute performance with low drawdowns, but expects better absolute performance in up or flat markets, than in down markets.

Investments

Fundamental Longs and Calls: Emerging Growth Opportunities

The Fund believes emerging companies with good business models create an excellent investment vehicle for outsized returns. The future earnings power of companies with certain key characteristics are often under-appreciated, creating the investment opportunity. The key characteristics the Fund looks for include:

- Large open-ended growth opportunity
- Markets with low, but growing penetration
- Demonstrated traction with their customer base
- Leading market share
- Significant barriers to entry
- Profitable business model with significant operating leverage
- Recurring revenues
- Sufficient capital
- Potential for above average returns based on future market multiples, combined with limited downside risk
- Good technical trading pattern

KALO CAPITAL MANAGEMENT, LP

Fundamental Shorts and Puts: Deteriorating or Flawed Fundamentals

The Fund primarily looks for two types of fundamental bearish positions: i) emerging growth companies that the Portfolio Manager feels are fundamentally flawed and likely to decline; and ii) companies impacted by industry changes such as increasing competition or shifting demand; . As industries change, many companies' products/services become inferior to ramping new technologies. When this momentum occurs, these companies often face significant challenges and suffer from dramatic reductions to their earnings power. The Fund looks to short these names when the investment community does not fully realize this market shift is occurring, or how significantly it may hurt the earnings power of the company.

Trading Opportunities

The Fund identifies and invests in opportunistic trading opportunities. Positions are typically made in equities, where a positive catalyst is expected, or it can benefit from the following two philosophies: 1) purchasing stocks that are in the early stages of a larger move upward, driven by fundamental good news, or 2) purchasing stocks that have been excessively sold off after disappointing or bad news where the Fund expects some of the losses to be recovered. This same strategy is used for shorting stocks, under the opposite circumstances. The Fund strongly consider the fundamental and technical downside risk to its positions, the liquidity, and sizes positions accordingly in order to limit potential losses. The Fund generally avoids holding positions entering a quarterly earnings report when significant bad news may hit the stock and not provide an opportunity to exit a position before the stock makes a significant move, unless the Fund believes that the stock is at strong support levels and large losses are highly unlikely. The Fund will also look to exit individual positions that are causing losses, in order to limit losses in any one name. These opportunistic investments tend to be of shorter duration than the fundamental emerging growth positions and occur on both the long and short side.

Hedges

The Fund often hedges long positions with index and company specific short exposed positions, in order to limit drawdowns when the stock market contracts. A portion of these hedges typically consist of index ETFs.

Risk Management

The Fund uses a variety of methods to control risk. On an individual stock basis, the Fund sets a maximum position size, with lower limits for stocks that are more volatile and less liquid. The Fund will also utilize options to enter positions in cases of extreme short term volatility. The Fund utilizes soft stop loss controls in order to limit losses from money losing positions.

In addition to controlling risk on an individual stock basis, the Portfolio Manager further reduces volatility and downside risk through diversification and by running a balanced portfolio. The portfolio maintains a balance by spreading exposure across a wide breadth of geographies, industries, valuation levels, beta levels, and risk levels. The Portfolio Manager will also limit the Fund's aggregate exposure to investments that are more speculative and could have significant downside risks.

The Fund utilizes a variety of risk analyses created internally and in conjunction with the Prime Broker, and regularly monitors exposure levels in order to ensure portfolio downside risk stays at controlled levels.

KALO CAPITAL MANAGEMENT, LP

Investment Team

Steven D. Friedman, CFA

Steven D. Friedman is the founder and Chief Investment Officer of Kalo Capital Management. Prior to founding Kalo in 2010, he spent ten years in the hedge fund industry as a Portfolio Manager and Senior Analyst, focused on the Emerging Growth space. Mr. Friedman was Portfolio Manager at Manalapan Oracle Advisers (2009-2010), Proprietary Trader at Madoff Securities * (Aug-Dec 2008), Portfolio Manager at Pequot Capital Management within the Emerging Manager program (2006-2008), senior analyst at Feirstein Capital Management (2001-2006), and financial analyst at Lazard Frères & Co. (1996-1998). Steven is also an executive with Potomac Partners, LP, a family fund of funds within his family, and with ABF Enterprises Inc., the general partner of that fund of funds. Mr. Friedman earned a BBA from the University of Michigan (1996), a MBA from Columbia Business School (2001). Steven has also been a CFA Charterholder since 2005 and is a Registered Investment Adviser in New Jersey.

* The proprietary trading desk at Madoff Securities was part of the Market-Making business at Madoff Securities. Federal prosecutors have stated this was unrelated to Mr. Madoff's fraudulent investment management business. It was later sold in March 2009.

Tony Alaimo, CFA

Tony Alaimo is an analyst at Kalo Capital Management. Prior to joining Kalo in 2014, he spent 7 years as an equity research analyst at Axiom International Investors, a \$12 billion dollar global equity manager. He has experience as a global equity generalist and financial services specialist. Tony graduated from Sacred Heart University (2006) with Bachelor of Arts degrees in Finance and Economics. He has been a CFA Charterholder since 2011.
