## **Monthly Report - Kalo Emerging Growth with Reduced Volatility Strategy**

Dear Investor:

For the month ended June 30, 2016, the Kalo Capital Management, LP fund gain 0.4% net, versus a loss of 0.2% for the Russell 2000.

	June 2016	YTD
Kalo Capital Mangement, LP	0.4%	-2.8%
Russell 2000	-0.2%	1.4%
S&P 500	0.1%	2.7%

## **Market Update**

The market continues to run up and down in spurts driven by broad macro influences, most recently the Brexit vote. With the United Kingdom's recent decision to exit the EU, market stability was once again sacrificed. Subsequent to this result, the Russell 2000 fell 7% in two days, only to recover 5.5% over the following three days. This back and forth volatility is just one example of the erratic flows in the overall market, making risk control more difficult. In this environment, we have continued to keep our gross and net exposures in the mid-low range of our typical levels (averaged 98% gross and 33% net during June).

When looking beyond the broad market volatility, we are seeing success in several of our independent stock picks. MeetMe (MEET) is one example of this – a smaller but successful social networking service. We have been following MEET for a couple of years and have been growing our position over the last couple of quarters as its cash generation has improved, driven by continued top line growth combined with significant operating leverage. The stock continues to run under the radar of much of the investment community, but is becoming more known. Its stock price is reflecting this growing awareness and improving fundamentals.

At the same time, many other individual stocks continue to rise and fall with significant volatility, uncorrelated with fundamentals, as investors adjust their overall exposure levels. We control this downside risk by reducing our overall exposure levels, but remain confident that as fundamentals play out, we will generate significant alpha performance.

In general, we continue to have a mixed view on the market. On the one hand we believe there is a significant amount of worry and concern among the investment community already, which makes it more difficult to disappoint the investment community's expectations. However, there are also significant shifts and unknown outcomes from the coming Brexit, while the S&P 500 continues to run close to its all-time highs. Going forward, we expect to continue to keep our gross and net exposure levels somewhat lower than historical averages, but will look to take advantage of individual stock drops in names we like in order to build/grow positions at attractive entry points.

## **June Performance**

In the month of June, the Fund generated gains from shorts and roughly broke even with long positions. The Fund broke even from long positions and gained 59 gross bps from short exposed positions. As can be seen on the chart below, the Fund's longs performed similar to the Russell 2000, losing 0% on average vs. the Russell's 0.2% loss. The shorts performed worse than the index, losing 1.8% and helping performance.

# KALO CAPITAL MANAGEMENT, LP

---

	Bps Gain/Loss	Avg Exposure	Average Performance
Longs	(1)	65%	0.0%
Shorts	59	-32%	-1.8%
Russell 2000			-0.2%

Alpha (Gross performance from stock selection)	0.4%
Beta (Gross performance from exposure)	0.1%

Our gains were led by MeetMe (MEET) and volatility related hedge trades. Losses were led by two of our larger investments, Energy Recovery (ERII) and LivePerson (LPSN). While the losses were disappointing, neither were driven by fundamental changes in the companies, and we remain bullish on these names. In the case of LPSN, the stock just today, in early July, is recovering more than half its June losses driven by a sell-side analyst upgrade.

We thank you once again for your belief in our process and performance.

Please feel free to call to discuss anything.

Sincerely,

Steven D. Friedman, CFA  
Founder and Chief Investment Officer

Please note that Kalo's expectations and strategy can change regularly and the views expressed here may change.

## OVERVIEW OF KALO CAPITAL MANAGEMENT

### Background

Steven Friedman is the founder and Chief Investment Officer of Kalo Capital Management, LLC ("Kalo"), and manages a long/short equity strategy focused on emerging growth opportunities. Kalo manages the Kalo Capital Management, LP fund ("The Fund"), as well as separately managed accounts.

### Strategy

The Fund utilizes an Emerging Growth with Reduced Volatility ("EGRV") strategy, developed by the Chief Investment Officer over the last decade. The EGRV strategy invests the bulk of capital in emerging growth equities with promising risk/reward characteristics based on fundamental analysis. These companies are often associated with large open-ended growth opportunities, disruptive technologies, disruptive business models, or changing industry dynamics along with powerful business models driven by significant operating leverage. Kalo looks to generate further alpha and hedge performance with company-specific and general market short positions. In addition, Kalo will execute short term trades in situations where we identify significant news/stock action that we expect to drive near term stock moves. This Trading Overlay is intended to further enhance alpha performance. The Fund reduces portfolio volatility through a variety of means including: i) adhering to many investment criteria for positions to limit downside risk on an investment-specific and portfolio basis; and ii) combining the emerging growth investments with other less correlated long and short positions.

The Fund believes there is more potential for consistent, outsized returns in long positions over time as companies grow. Thus, the Fund favors having a net long exposure. However, the Fund also looks to hedge these long positions with index and company-specific short exposed positions to create additional alpha, smooth returns and limit drawdowns. This risk control helps enable the Portfolio Manager to take advantage of market contractions.

The majority of the Fund's positions will be in equities. Derivatives are used opportunistically in order to: make an investment with extremely high volatility, create a hedge to a specific position or portion of the portfolio, or to gain additional exposure to an idea.

### Investment Philosophy

The Fund's objective is to produce relatively low volatility returns with consistent alpha primarily by identifying emerging growth opportunities that are fundamentally mispriced by the market. Throughout many industries, companies bring products/services to the market that have the opportunity for extremely fast-paced growth. Many of these opportunities are caused by the introduction of disruptive technologies, disruptive business models, and changing industry dynamics. When these transforming events occur, the Fund believes well managed companies positioned properly can achieve superior growth and offer the opportunity for attractive stock returns.

The Portfolio Manager believes that the market often misprices these emerging growth stories. This provides the Fund the opportunity to build positions when it believes that the general market is not appropriately valuing the stock. This opportunity is often caused by the following:

- **The market broadly values companies on near term results, disregarding longer term results.** The market focuses on valuation multiples looking out 1-2 years, initially disregarding the following years. However, many of these opportunities see accelerating EPS growth 2-4 years out, driven by operating leverage and economies of scale, which the

# KALO CAPITAL MANAGEMENT, LP

---

market overlooks. By establishing an investment before the market focuses on these outer years, the Fund may earn consistent alpha.

- **The investor community often develops unrealistic financial expectations.** These inflated expectations can be caused by a lack of industry understanding, irrational exuberance, and management hype. This creates opportunities for short sale investments.
- **Sell-side analysts often don't recognize or acknowledge the sales growth and/or leverage impact that can occur during certain inflection points.** The Fund believes that sell-side analysts will generally only be comfortable forecasting a certain amount of fundamental growth, even when evidence points to more significant growth, in order to not be recognized as overly bullish. This situation often leads to companies significantly exceeding earnings expectations, despite the stock being known by the investment community.
- **The broader market often over-reacts to positive or negative events.** These over-reactions cause dramatic stock price movements, which may create opportunities with relatively low downside risk when a stock is overly depressed as well as short opportunities when a stock is inflated.
- **Many emerging growth companies are not well known by the broader market.** Many emerging growth companies are under followed by sell-side analysts, and thus are either unknown or not well understood by the investor community. Discovering these companies before the general market creates the opportunity to make an investment while it is undervalued.

The Fund believes that traditionally investments focused in this space have been characterized by attractive returns accompanied by very high volatility. The Portfolio Manager believes it is possible to capture most of these inherent returns with reduced volatility by using a balanced, diversified, and hedged portfolio approach, supported by rigorous fundamental and stock technical analysis. The Fund will also utilize options to control downside risk. The Fund targets absolute performance with low drawdowns, but expects better absolute performance in up or flat markets, than in down markets.

## Investments

### **Fundamental Longs and Calls: Emerging Growth Opportunities**

The Fund believes emerging companies with good business models create an excellent investment vehicle for outsized returns. The future earnings power of companies with certain key characteristics are often under-appreciated, creating the investment opportunity. The key characteristics the Fund looks for include:

- Large open-ended growth opportunity
- Markets with low, but growing penetration
- Demonstrated traction with their customer base
- Leading market share
- Significant barriers to entry
- Profitable business model with significant operating leverage
- Recurring revenues
- Sufficient capital
- Potential for above average returns based on future market multiples, combined with limited downside risk
- Good technical trading pattern

# KALO CAPITAL MANAGEMENT, LP

---

## **Fundamental Shorts and Puts: Deteriorating or Flawed Fundamentals**

The Fund primarily looks for two types of fundamental bearish positions: i) emerging growth companies that the Portfolio Manager feels are fundamentally flawed and likely to decline; and ii) companies impacted by industry changes such as increasing competition or shifting demand. As industries change, many companies' products/services become inferior to ramping new technologies. When this momentum occurs, these companies often face significant challenges and suffer from dramatic reductions to their earnings power. The Fund looks to short these names when the investment community does not fully realize this market shift is occurring, or how significantly it may hurt the earnings power of the company.

## **Trading Opportunities**

The Fund identifies and invests in opportunistic trading opportunities. Positions are typically made in equities, where a positive catalyst is expected, or it can benefit from the following two philosophies: i) purchasing stocks that are in the early stages of a larger move upward, driven by fundamental good news; or ii) purchasing stocks that have been excessively sold off after disappointing or bad news where the Fund expects some of the losses to be recovered. This same strategy is used for shorting stocks, under the opposite circumstances. The Fund strongly considers the fundamental and technical downside risk to its positions, the liquidity, and sizes positions accordingly in order to limit potential losses. The Fund generally avoids holding positions entering a quarterly earnings report when significant bad news may hit the stock and not provide an opportunity to exit a position before the stock makes a significant move, unless the Fund believes that the stock is at strong support levels and large losses are highly unlikely. The Fund will also look to exit individual positions that are causing losses, in order to limit losses in any one name. These opportunistic investments tend to be of shorter duration than the fundamental emerging growth positions and occur on both the long and short side.

## **Hedges**

The Fund often hedges long positions with index and company specific short exposed positions, in order to limit drawdowns when the stock market contracts. A portion of these hedges typically consist of index ETFs.

## **Risk Management**

The Fund uses a variety of methods to better control portfolio risk. On an individual stock basis, the Fund sets a maximum position size, with lower limits for stocks that are more volatile and less liquid. The Fund will also utilize options to enter positions in cases of extreme short term volatility. The Fund utilizes soft stop loss controls in order to limit losses from money losing positions.

In addition to controlling risk on an individual stock basis, the Portfolio Manager further reduces volatility and downside risk through diversification and by running a balanced portfolio. The portfolio maintains a balance by spreading exposure across a wide breadth of geographies, industries, valuation levels, beta levels, and risk levels. The Portfolio Manager will also limit the Fund's aggregate exposure to investments that are more speculative and could have significant downside risks.

The Fund utilizes a variety of risk analyses and regularly monitors exposure levels in order to ensure portfolio downside risk stays at controlled levels.
